Quarter Round		

Common Uses of Moldings

Quarter Round

Quarter round moldings are installed against existing baseboards to cover the required expansion/contraction space allowed for hardwood flooring. It can also be used under cabinet toe kicks or at the base of stairs.

Stair Nosing

Stair nose is used to create a decorative finished edge on a stairstep or staircase, and as a transition when installing plank or strip on stairs, landings, or step-downs.

Baby Threshold

Used as a transition from a room with hardwood flooring to a carpeted room, Also commonly used at sliding door areas where expansion space is needed.

Reducer Strip

Most commonly used to transition between hardwood flooring and floor coverings of lower vertical heights, such as vinyl or concrete. Can also be used around fireplaces as a design element.

T-Molding

This molding is generally used as a transition between rooms with hardwood flooring and tiled surfaces. Can also be used to connect to existing wood floors.
